## Tactical stretcher „AlfaCharlie“ mod. 03

### Product description and specification

Tactical stretcher „Alfa Charlie“ are intended to evacuate a wounded person. They are quickly prepared for use and do not require specific skills.

The stretcher is packed in a cylindrical case which is made of abrasion-resistant impregnated fabric, the case has two carrying handles and two Molle system straps sewn to the sides of the stretcher case so that the stretcher can be attached to backpack in both vertical and horizontal positions.

The stretcher case is opened by pressing the plastic clasp and pulling down the cover of the case. On the holster closure hood, a fabric pouch is attached from the inside for storing extra straps and instructions for use.

**Stretcher case dimensions: length 650 mm, diameter 220 mm.**

Tactical stretcher "Alfa Charlie" is made of abrasion-resistant black polyethylene plate. Technical characteristics of polyethylene board:

- **Density: 0.95 g/cm<sup>3</sup>.**
- **Operating temperature from -50°C to +80°C;**
- **Thickness: 2 mm**
- **Color: black**
- **Weight 1.9 kg / m<sup>2</sup>**

The Alfa Charlie tactical stretcher has six carrying handles, four handles on the sides of the stretcher, one handle on the front of the stretcher and one handle on the back of the stretcher. The handles are made of 30 mm wide belt tape (sling) passed through a plastic tube with a diameter of 20 mm, so that the sling does not cut the wearer's hands.

The Alfa Charlie tactical stretcher has four casualty restraint straps that can be repositioned by moving them to other loops on the stretcher. The 25 mm wide straps connect to each other through D-shaped metal loops, which allow you to quickly and easily connect the straps to each other and fix the injured person on the stretcher. After tightening the belts, the injured person is immobilized and can be transported.

In the back part of the stretcher, where the injured person's legs are, there are two more belts, which, when tightened, fold the back part of the stretcher. In this way, the legs are fixed both from the back of the stretcher and from the sides.

In the front part of the stretcher, a 30 mm wide and 3 m long tension rope with hand loops at the ends of the rope is threaded through the loops of the carrying handle. One or two people can drag the injured person.

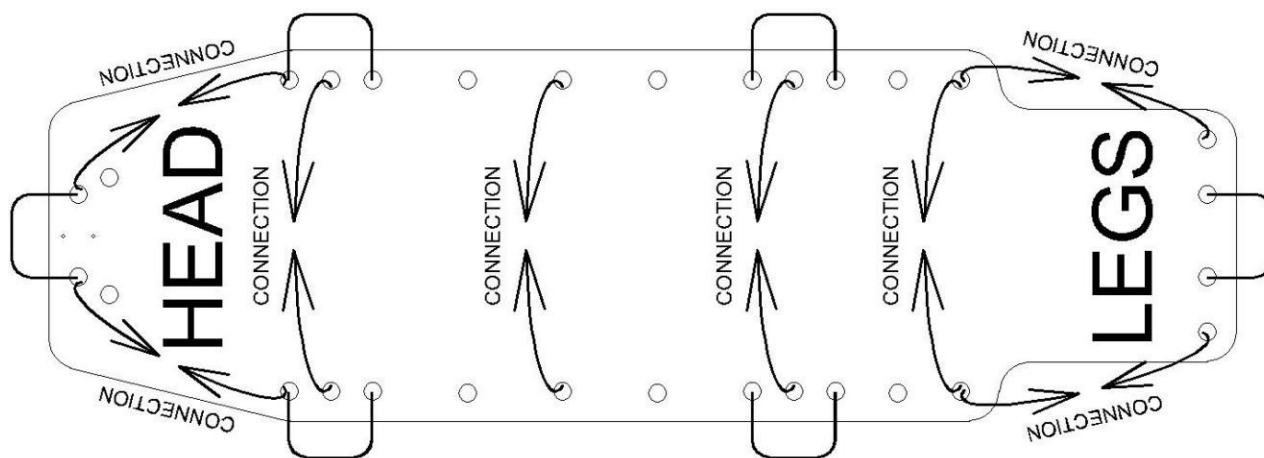

Also, this stretch rope is used to secure rolled up stretchers before they are packed into the transport case.

**Alfa Charlie Tactical Stretcher Specification:**

- Length 2000 mm (2 m)
- Width 625 mm (62.5 cm)
- Thickness 2 mm
- Weight including transport case 3,2 kg.
- The maximum weight of the injured person is 180 kg.
- Stretcher case dimensions: length 650 mm, diameter 220 mm

**The "Alfa Charlie" tactical stretcher set consists of:**

- Stretcher 1 pc.
- Transport case 1 pc.
- Additional locking belt with buckle 1 pc.
- Tension rope 1 pc.
- Product description and instructions for use 1 pc.
